

Hidden Treasure.

The Panorama Deck, an option under study for the MD-11 stretch version, offers the potential for increased capacity with lower-deck seating.

Airlines will have the ability to carry passengers and cargo without sacrificing the advantages of flying the most efficient wide-body plane in the world. Located in the forward fuselage, the Panorama Deck would have a floor width of nearly ten feet. So your passengers won't sacrifice the comfort they demand on long flights. Plus, the angled positioning of the windows that results from the fuselage curvature offers window-seat passengers a truly panoramic view.

The Panorama Deck. An option that can mean pure joy for your passengers. And profit for you. Yet another MD-11 innovation that makes all the sense in the world.
